Career Objective

Recent Computer Science graduate seeking a junior or graduate software engineering role, with hands-on experience designing and deploying full-stack web applications and building software systems through academic and personal projects. Skilled in backend development, web API design, and modern web technologies, with a strong foundation in object-oriented programming and databases.

Education

BSC | COMPUTER SCIENCE | UNIVERSITY OF AUCKLAND | FEBRUARY 2023 – MAY 2026

- Developed software systems using Python, Java, C#, and JavaScript in individual and team projects
- **Relevant Coursework:** Object-Oriented Software Development (A+), Cyber Security (A+), Database Systems (A-), Software Development Methodologies (A), Large-Scale Software Development (A)

Projects

GAME TRACKER (PERSONAL FULL-STACK PROJECT) - [LINK](#)

Next.js / React / TypeScript / Tailwind CSS / Prisma / Supabase / PostgreSQL

- Designed and **deployed** a **full-stack web application** that tracks game completion and awards XP through a gamified progression system
- Built using **Next.js** App Router with server/client separation, Supabase **authentication**, and **Prisma ORM** with **PostgreSQL** for structured data persistence
- Implemented **REST API** routes for XP calculation, completion tracking, and server-authoritative state management with optimistic UI updates
- Integrated **RAWG API** for searchable game discovery with caching strategies to minimize external API usage
- Developed responsive UI using **Tailwind CSS** and deployed via Vercel with automated CI/CD

2D GAMES IN JS PHASER (CAPSTONE PROJECT) - [LINK](#)

JavaScript / TypeScript / Phaser.js

- Collaborated in a **5-person Agile team** to design and develop two 2D games, Fix It and Magic Cups
- Implemented core gameplay systems for Fix It, including physics, collision handling, input processing, and game state management
- Designed modular, reusable TypeScript components following object-oriented principles
- Used Git and GitHub for version control, issue tracking, and pull requests
- Gained **experience working with a client**, having **deadlines**, and getting iterative feedback

DEVELOPER PORTFOLIO (PERSONAL PROJECT) - [LINK](#)

Next.js / React / TypeScript / Tailwind CSS

- Developed a responsive portfolio website using **Next.js** and **React** to showcase my personal projects
- Built using Next.js and React with **TypeScript** for type safety and maintainable component-based architecture
- Implemented modern UI styling with **Tailwind CSS**, including responsive and layouts, hover interactions
- **Deployed and hosted** using Vercel with automated deployments via GitHub integration

Skills & Abilities

Programming Languages: JavaScript / TypeScript, Python, Java, C#, SQL

Frameworks & Technologies: Next.js (React), Phaser.js, Godot, HTML, Tailwind CSS / CSS, .NET, Web APIs

Software Engineering: Object-Oriented Programming, Git, Agile / Scrum, Full-Stack Development

Additional Knowledge: Web development fundamentals, machine learning concepts, cyber security principles
